

# Advanced Data Capture as unique as your organization.

## Finally, a data capture solution that goes beyond template-based technology to process your unique documents based on your specific business requirements.

Extract's Advanced Data Capture for SharePoint provides a comprehensive solution for extracting business-critical content for business process improvement or analytics. Whether your information is on paper or in electronic files, our Advanced Data Capture solution automatically tags documents with relevant metadata. Processed documents are routed to designated SharePoint libraries or folders where additional workflows can be applied. Extract uses content logic to standardize metadata, producing accurately indexed documents that are optimized for search.

- **Optimize the intelligent collection of data**
- **Customized for your business requirements**
- **Over 1.5 billion documents processed**
- **"Listening" technology for automated processing**
- **Rapid ROI**

Captures all data types from structured (form-based) and unstructured documents such as: invoices, laboratory reports, legal documents, public records and many others

90 different data capture and manipulation objects are used to build your state of the art data extraction solution

Well-tested, scalable solution with a productivity-boosting user interface drives processing speed while ensuring quality

Monitors designated SharePoint libraries and automatically processes scanned images according to pre-defined rules as they are added

Upfront customization results in superior results on day one of your project

Extract Systems is a Microsoft Certified ISV Partner providing complimentary technologies to help you get the most out of your SharePoint platform.

# Advanced Data Capture as unique as your organization.

## Industry Solutions

### Financial Services:

Streamline business processes, reduce operating costs, ensure regulatory compliance and safeguard critical information

### Healthcare:

Simplify patient records management, improve operations, manage risk and compliance, and increase data interoperability

### Government Agencies:

Improve service levels, secure personal data, lower costs, react quickly to change

### Insurance:

Dramatically reduce data entry costs associated with claims and forms, improve turn around and protect personal information

### Retail:

Optimize data collection for BPI and analytics, leverage existing IT investments and save costs

## Product Features

- Perform high-volume batch processing and/or decentralized on-the fly metadata capture
- “Folder watching” to automatically create batches of new items from multiple sources
- Ability to perform database look-ups to external sources based on key content found in document and populate as metadata
- Cloud-based solutions eliminating the need for any installation into your current production farm
- Unlimited rule additions for the life of the product gives your organization the necessary flexibility and scalability for a wide range of documents and workflows

## Technical Highlights

- Built in the Microsoft Windows environment using the industry standard Component Object Model (COM), using numerous programming languages and libraries including C++, .NET, MFC and ATL
- Compatible with legacy scanning devices including Fujitsu, Bell and Howell, Kodak, Canon and more
- Supports all image types, including paper, fax, email, Microsoft documents and digital formats such as PDFs, TIFs, JPGs and GIFs
- Orientation recognition
- Import of existing multi-page or single-page files
- Automated conversion from any electronic source to PDF prior to OCR and processing
- Image enhancement tools including de-speckle, de-skew and clean-up tools to maximize data capture accuracy

## Why Extract?

Customers choose Extract because we offer more than OCR-driven solutions with standard document classification, limited data capture and forms processing. We start with the industry’s most comprehensive business rules designed to capture all data types within structured and unstructured documents. Then we customize every solution based on each customer’s business needs and documents. This formula delivers superior accuracy and ROI on the first day of implementation.

Extract’s focus on providing outstanding service and satisfaction means that our success is defined by the success of our customers and partners. Our experienced development and support teams are locally based in Madison, Wisconsin and provide unmatched agility and turnaround.
