ID Shield Advanced Redaction for SharePoint

Security Protection

Privacy

Compliance

Data

Secure. Protect. Collaborate. Share.

ID Shield for SharePoint removes sensitive content from documents for public record access or any document sharing process that involves non-disclosure of confidential information. ID Shield empowers enterprise-wide collaboration without the risk of identity theft or exposure of private content.

- **Collaborate without compromising data security**
- **Highly accurate, rules-based redaction**
- **Scalable and flexible**
- **Fully-automated, verification-based & hybrid workflows**
- **Supports all common image formats**

Empowers administrators with a more granular security tool to optimize collaboration while protecting sensitive content

National Rule Set contains production-tested rules for more than 20 sensitive data types. More than 1.5 Billion images processed

Designed to redact large quantities of archived records and daily processing of new documents

Produces precise accuracy statistics for fully-automated, verification-based as well as hybrid redaction approaches to optimize workflow for each customer

Handles all Microsoft document formats, including Outlook, Word and Excel as well as all common image formats: TIFF, PDF, GIF, JPG and PNG

Extract Systems is a Microsoft Certified ISV Partner providing complimentary technologies to help you get the most out of your SharePoint platform.

ID Shield Redaction for SharePoint

Industry Solutions

ID Shield has been selected by more than 400 business and government organizations to mitigate the risk of inadvertent disclosure of private information, and comply with State and Federal identity theft and information security laws such as the FOIA, HIPAA and Sarbanes Oxley Act.

Public Sector

Secure private information for online public record access and PCI compliance

Healthcare

Protect PHI/PII and comply with HIPAA regulations

Insurance

Electronically remove personal information within forms and applications

Title companies

Eliminate the risk of inadvertent disclosure of sensitive information within electronic closing documents

Product Features

- Perform high-volume batch processing and/or decentralized on-the fly redaction
- Cloud-based and Redaction Service models
- “Folder watching” to automatically create batches of new items from multiple sources
- Extract’s proprietary National Rule Set™ is the most extensive library of redaction rules currently available on the market. These rules provide a substantial head start for the custom rule set we develop for each new customer.
- Legislation Guard™ - Extract offers two technology options to help public sector organizations proactively prepare for the possibility of future redaction mandates.

Technical Highlights

- Built in the Microsoft Windows environment using the industry standard Component Object Model (COM), using numerous programming languages and libraries including C++, .NET, MFC, and ATL
- Industry-leading OCR tool utilizes a triple voting engine that processes characters using three different OCR algorithms and selects the best matching character by using an intelligent voting mechanism
- Image enhancement tools including de-speckle, de-skew and clean-up tools
- Fuzzy Text Search matches all approximate results for a word, name or number pattern
- ID Shield Statistics Reporter Tool – allows customers to independently calculate redaction accuracy
- Custom Reports - ID Shield supports 17 reports to maximize processor utilization and minimize human management time and cost

Why Extract?

Customers choose Extract because we offer more than OCR-driven solutions with standard document classification, limited data capture and forms processing. We start with the industry’s most comprehensive business rules designed to capture all data types within structured and unstructured documents. Then we customize every solution based on each customer’s business needs and documents. This formula delivers superior accuracy and ROI on the first day of implementation.

Extract’s focus on providing outstanding service and satisfaction means that our success is defined by the success of our customers and partners. Our experienced development and support teams are locally based in Madison, Wisconsin and provide unmatched agility and turnaround.
